Final Project Summary

JaeYoon Song

1. Topic

Personal portfolio website. The main purpose of my website would be to introduce myself and show some of my works. Theme of the website is a cube lost in space.

2. Domain

As I mentioned very shortly in my presentation, I hosted my project in **https://jyoonsong.github.io/** using Github Pages. I have two reasons why. First, I wanted to use my own domain. Second, I needed more space. I found out that Github Pages provide free hosting up to 1GB, so I decided to use it.

- **Github Repository** : https://github.com/jyoonsong.github.io
- **Master Branch:** I won't edit the code in master branch, which is the code deployed, until the grading is all done.
- **Beta Branch:** I may make changes to the code in beta branch but it will not be applied to the website until the grading is all done.

3. Extra Requirements

JS Plugin - ScrollMagic.js

- https://github.com/janpaepke/ScrollMagic

JS Library - Modernizr

- https://modernizr.com : Detects if the current device supports touch events, 3d transform etc.

CSS 3D Animations & Transitions

- I used CSS 3D Transform in order to make the animation of a cube.

Formscarry

- https://formscarry.com : I haven't programmed the server side, so Formscarry receives all the forms submitted in my website.
